JAVA SET 57

(Basic Programs)

1. Write a program to find Addition of two integers.
2. Write a program to find division of two integers using type casting to double .
3. Write a program to swap two integers & display the result before swapping & after swapping (hint: use third variable).
4. Write a program to swap two integers without using third variable & display the result before swapping & after swapping.
5. Write a program which takes the number of days as input & convert it into years, months, weeks, & days (hint: consider 365 days for a year, 30 days for a month).
6. Write a program which takes the number of seconds as input & convert it into hours, minutes and seconds.
7. Write a program which takes number of millimeter and converts them into meters, feets, inches, centimeter and then millimeter.
8. Write a program to find the mean and Standard Deviation of 5 integers.
9. Write a program to find the distance between the two points in Cartesian coordinate system.
10. Write a program to find the area of triangle when three sides are given. (Hint: use heron's equation $A = \sqrt{S(S-a)(S-b)(S-c)}$ And S=(a+b+c)/2 , S=Semi – Perimeter)
11. Write a program to find the area of triangle when three points are given.
12. Write a program to solve this equation

$$u = \frac{-b + \sqrt{b^2 - 4ac}}{2a}$$

13. Write a program to check whether a given number is even or odd using ternary operator.
